

DX-AC6PA Intercom

AVCOMM's DX-AC6PA panel mount intercom is designed to provide the highest level of audio performance. The Quick Install Kit makes it a snap for almost anyone to install the DX-AC6PA without the tedious time consuming task of soldering individual connectors. It is designed with a compact aluminum case that fits virtually anywhere on the panel.

The DX-AC6PA is compatible with either 12 or 28 volt electrical systems and is designed for use with up to six headsets so you can start with the pilot and co-pilot positions and add passenger positions as they are needed.

Communication features include a two stage LED that displays a green light when the power is on and yellow during radio transmission making a 'stuck mic' easy to spot. The voice-activated squelch circuit (VOX) adjusts to a broad range of noise environments or can be set for a continuous open-mic condition. Pilot isolate (ISO) provides exclusive pilot communications with the ATC, pilot priority PTT allows the pilot to override co-pilot transmissions, and the 'fail-safe' feature supplies a direct connection to the aircraft radio in case the power supply to the intercom is disrupted. With the optional audio panel, a music-in jack provides in-flight entertainment, automatically muting during intercom or radio activity. Add an audio recorder and with the record out feature, you can record ATC transmissions or cockpit conversations. Full three-year factory warranty.

DX-AC6PA Quick Install Kit Included

25 Pin Connector

- 2~6 place panel mount intercom
- Quick Install Kit included
- Solid extruded aluminum frame
- Compact size fits virtually anywhere
- 'Stuck mic' indicator — power transmit LED
- Cell phone compatibility coming soon
- 12~28 volt compatible
- Pilot priority PTT
- Fail-safe feature
- Full three-year factory warranty

AC-2EX Intercom

Expandable, stereo and portable – AVCOMM's new AC-2EX may possibly be the only intercom you will ever need! Measuring a mere 5.1" by 2.85", the AC-2EX is designed to produce powerful communications you can depend on. Need four positions? Simply add the AC-2XM module to accommodate additional passengers.

The AC-2EX is compatible with either 12 or 28 volt electrical systems and connects securely with AVCOMM's unique "positive-lock" powercord. If the power supply to the intercom is lost, the intercom automatically switches to battery back-up power.

An integrated circuit allows you to use mono or stereo headsets. A two stage LED displays a green light when the power is on and yellow during radio transmission making a 'stuck mic' easy to spot. The voice-activated squelch circuit (VOX) adjusts to a broad range of noise environments or can be set for a continuous open-mic condition. On the front panel there is a convenient push-to-talk button for the pilot. It has a pilot-priority feature to allow the pilot to override the co-pilot transmissions. Pilot isolate (ISO) provides exclusive pilot communications with the ATC, and the 'fail-safe' feature supplies a direct connection to the aircraft radio in case the power supply to the intercom is disrupted. The AC-2EX is equipped with a music-in jack for in-flight entertainment with automatic muting during intercom or radio activity (cable included). Add an audio recorder and with the record out feature, you can record ATC transmissions or cockpit conversations. AVCOMM's AC-2EX is a powerful, full featured, easy to expand, mono-stereo intercom. Full three-year factory warranty.

Optional AC-2XM Expansion Module easily converts to four positions.

- AVCOMM's Expandable Portable: two to four place
- Rugged compact design
- Cell phone compatibility coming soon
- Two 9V batteries or 12-28V DC power
- 'Stuck mic' indicator – Power-transmit LED
- For use with mono or stereo headsets
- Pilot priority PTT
- Fail safe feature
- Weighs only 14.1 ounces
- Full three-year factory warranty
